THE LEGACY OF KRIS BARR

Mrs. Kris Barr was like a second mom to Vapor Ministries founder Micah McElveen. She lived life pouring herself out in the service of others. She gave generously to Vapor since its inception, advocated for it constantly, and served multiple board terms. In her second term, she was diagnosed with cancer. Even though she was battling for her life, she continually asked Micah for updates and shared that she wanted to beat it partly because she wanted to return to Haiti.

As her condition worsened, she contacted Micah and told him that instead of living to go to Haiti, she had a request for him to fulfill in her passing. She asked him to dedicate funds her family and friends gave to building the new center she would not personally see. On behalf of the entire Vapor Ministries team, we decided to honor the legacy of this kind and extraordinary woman by naming this center, so dear to her, in her honor.

KRIS BARR FERRIER CENTER IMPACT

Rose is a 12-year-old girl living in the village of Ferrier, Haiti. She has not been able to attend school regularly because her family cannot afford the fees. Her parents take any work they can find to feed the family, and any extra they have goes toward trying to keep their small home standing. During heavy rain, Rose has trouble sleeping due to the water coming in through the holes in the walls and roof. And in Rose's community, all except one of the wells dry up in the summer, and the only well that isn't dry isn't actually clean water.

Your partnership is helping us reach Rose with a center that will transform her community and very likely change the course of her life and her eternity. You are helping us bring her a well that won't run dry - a physical well to sustain her body and a spiritual well to feed her soul.

Thank you for prayerfully considering partnering with us in Ferrier. Together, we can help thousands like Rose not just survive but flourish.

With your help, we can complete the buildout of this hub of hope for thousands in Ferrier, Haiti.

ADMIN BUILDING

We believe in equipping locals to lead the effort to transform their community and rely exclusively on indigenous people to direct and oversee all ministry activities and programs. This empowers locals with inherent leadership ability to serve their community for God's glory.

The admin building provides office and gathering space designed to increase our efficiency and effectiveness with regards to our mission. Group meeting spaces and individual offices are designed to strengthen our shared culture and provide focus for our mission. The admin building is essential infrastructure that intentionally supports a unified heartbeat that is shared throughout all center activities.

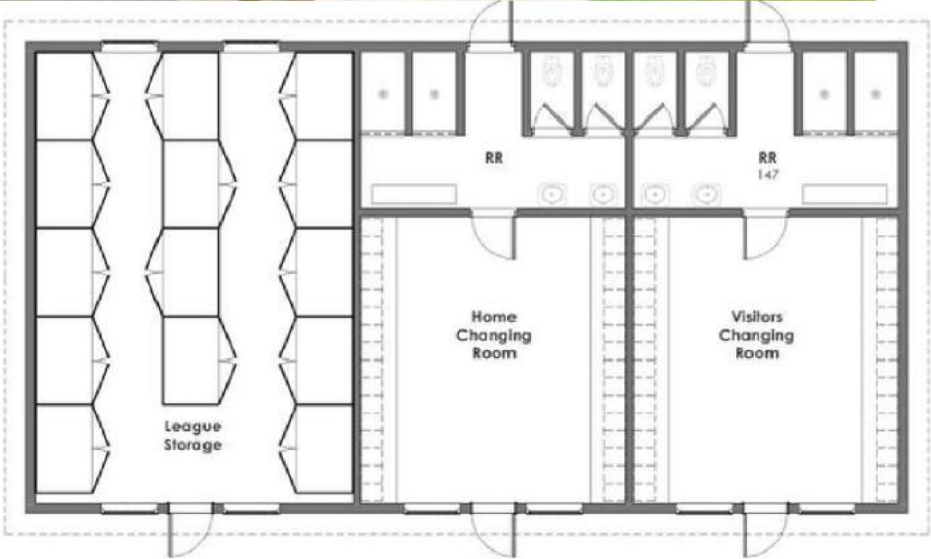

LEAGUE BUILDING

Over 1,100 children, youth, and adults joined our discipleship league in Ferrier!

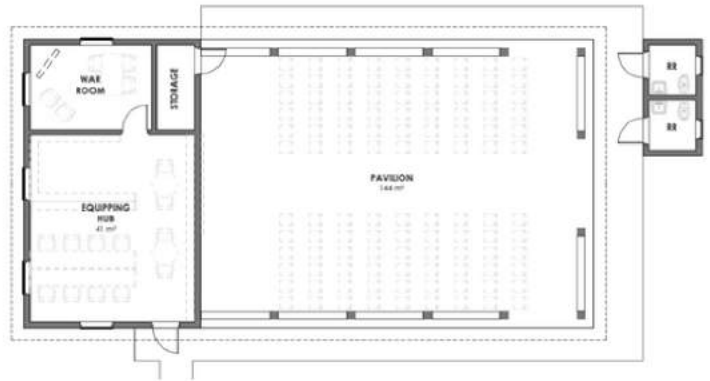

The league building houses the physical supplies needed to run our discipleship leagues such as jerseys, balls, nets, whistles, cones, discs, chalk, bibs, pumps, ball bags, and more. This building also includes modern restroom facilities and changing rooms. Hundreds of children, youth, and adults will use this facility daily as they come to the center to play the game they love and hear about the One who loves them.

PRAYER & EQUIPPING HUB

The “Prayer” side of the Hub features a war room for prayer, praise, and worship. This space provides a retreat for our team and community members to spend focused time with the Father while preserving a location for the Watchmen to be on the wall as a part of our 24hr global prayer chain.

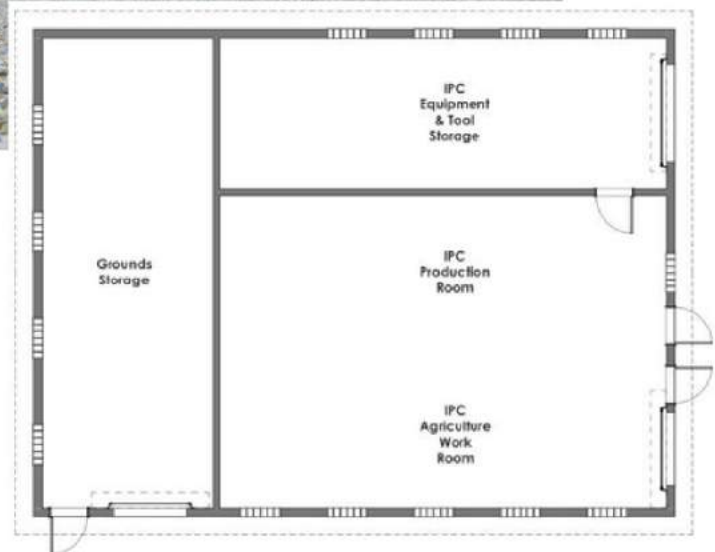

The “Equipping” side of the Hub houses resources and training space for equipping leaders, staff, and the community with knowledge and skillsets that will greatly accelerate community transformation. We believe investing in and equipping local people is essential for excellent service today and outreach expansion tomorrow.

BARN

The Barn at the Ferrier center is a multipurpose building used for both storage and revenue generation.

Part of the Barn is dedicated to our International Profit Centers department for the production of Haitian goods and agricultural products to be sold in local markets or exported to offset a portion of the ministry's operating expenses.

The remainder of the space is where our Ferrier Center Grounds Team stores their lawn and landscaping equipment and all carpentry tools, maintenance supplies, and rough hardware needed to maintain an excellent facility.

AGRICULTURE PROJECT

Agriculture plays three critical roles at our Haitian centers. First, we always tithe the first fruits of our harvests to the community as a thank you to the Lord and a blessing to those in food insecurity. Second, the crops are sold in local markets to provide a sustainable revenue source for the ministry. Third, our teams offer farming education and business startup capital to locals so that they can provide for their families.

Our Ferrier center has 11 acres of dedicated space for banana farming. The projected 13,000 trees will yield more than 200 tons of fruit. This staple crop will not only provide much-needed nutrition but also promote sustainable change to families and the community.

SOLAR PANEL SYSTEM

Solar power is an essential solution to the energy challenges faced by our ministry centers in Haiti. With the unreliable power supply from the electric company, we need an alternative that will ensure consistent and clean energy to power our operations. Solar power presents a reliable option that is both eco-friendly and sustainable in the long run. By using solar panels to power the well and irrigation pumps, Administration Building, and the Hornsby Prayer & Equipping Hub, we can provide clean water, efficient administration services, and adequate training and equipping of the community members.

The high fuel cost and the difficulties in obtaining it are major impediments to our operations. Solar power will enable us to reduce our dependence on fuel and save costs that would have been used to purchase and transport it. Additionally, the project will help mitigate the effects of fuel shortages and long lines at fuel stations, a common challenge in Haiti. Therefore, adopting solar power is a necessary step that will enable us to provide consistent and reliable services to the community while reducing our costs and contributing to the preservation of the environment.

PARTNERSHIP OPPORTUNITY

God has blessed the generosity of our partners and the work of our hands in the establishment of this outreach center in Ferrier, Haiti. We opened the gates on October 7th and began discipleship and poverty alleviation programming. We are actively raising the remaining funds to complete this hub of hope. Would you prayerfully consider sowing into this life-changing mission?
