W. AFRICA FACILITY IMPROVEMENTS

Our Togo centers serve as operational and spiritual hubs for outreach, discipleship, and community care. These targeted facility improvements address practical needs that protect infrastructure, support team well-being, and ensure our centers remain functional, safe, and welcoming places for ministry.

Togoville Center

Pavers Around Admin Building

The area surrounding the Administration Building at the Togoville Center is prone to erosion and water pooling during the rainy season. Laying pavers will improve drainage, reduce mud and dust, protect the building's foundation, and create safer walkways for team members and visitors. This upgrade enhances both durability and accessibility for daily operations.

West Africa Regional Office

Additional A/C Unit

At the West Africa Regional Office, increased program usage and team member presence have created the need for an additional air conditioning unit. Installing this unit will improve working conditions, protect equipment, and allow ministry and administrative activities to continue effectively in extreme heat.

Partnership Request

Thank you for your heart for the ministry and those we serve together. By helping us care for the people and physical spaces of our centers, you strengthen the foundation that supports long-term impact. Thank you for prayerfully considering funding these projects.

TOGOVILLE PAVERS & INSTALLATION	\$ 7,000
REGIONAL OFFICE AIR CONDITIONING	\$ 5,000
<hr/>	
TOTAL	\$ 12,000
